PRODUCT NAME

KEMBIND MAXI DRY

DESCRIPTION

KEMBIND MAXI DRY is a highly effective, low inclusion pellet binder for all types of feed

INGREDIENTS

All ingredients contained in KEMBIND MAXI DRY conform with EEC feedingstuffs regulations, and meet FDA approval.

- Guar Gum
- Locust Bean Gum
- Calcium Sulphate

ADVANTAGES

- Strong durable pellets
- Fewer fins
- KEMBIND MAXI DRY requires no special operating procedures. It is not necessary to change the mill settings than is normal for a feed
- KEMBIND MAXI DRY requires less storage space, freeing up vital warehousing. A savings bonus
- KEMBIND MAXI DRY requires less room in the feed formula, improving your least cost formulation opportunities, or allowing for increased nutrient content in the ration. Another savings bonus.
- KEMBIND MAXI DRY reduces handling and labour problems, associated with the extra volume and inconvenience of handling many high inclusion binders. A savings bonus too.
- KEMBIND MAXI DRY frees bulk holding bins, now used for high inclusion binders.
- A fourth savings bonus.
- KEMBIND MAXI DRY offers more efficient use of available steam, because of its greater moisture penetrating properties, enhancing pellet quality under a variety of steam conditions.

APPLICATION

- Use at the rate of 1-2 kg per tonne of finished feed
- Should be added after the vitamins and other micro-ingredients are added
- Follow general pelleting guidelines that recommend applying the maximum amount of steam in the conditioning chamber, and corresponding production rate, to produce the best quality pellet out of the die

STABILITY

Stable for 1 year when in sealed bags

STORAGE

Store in a dry, cool place – out of direct sunlight

HAZARD IDENTIFICATION
